

# Yawelmani Yokuts

**Yawelmani Yokuts** (also spelled **Yowlumne** and **Yauelmani**) is an endangered dialect of Southern Valley Yokuts historically spoken by the Yokuts living along the Kern River north of Kern Lake in the Central Valley of California.<sup>[1]</sup> Today, most Yawelmani speakers live on or near the Tule River Reservation.<sup>[2]</sup>

## Name

Academic sources frequently use the name "Yawelmani" while referring to the language, though tribe members more often use the name "Yowlumne."<sup>[2]</sup>

When referencing their language, modern speakers of Yawelmani use the terms "inyana" (Indian), and "yaw'lamnin ɕeexil" (speech of the Yowlumne).<sup>[2]</sup>

## Phonology

	<u>glottalized</u>	w' /w'/	l' /l'/		y' /j'/		

## Vowels

Yawelmani has 8 vowel phonemes:

	<u>Unrounded</u>		<u>Rounded</u>	
	<u>short</u>	<u>long</u>	<u>short</u>	<u>long</u>
<u>High</u>	i	i:	u	u:
<u>Non-high</u>	a	a:	ɔ	ɔ:

- There are 4 short-long vowel pairs.
- Short high vowels may become more centralized in fast speech: /i/ → [ɪ], /u/ → [ʊ].
- Long high vowels are almost always lower than their short counterparts: /i:/ → [ɛ:], /u:/ → [ɔ:].
- All long vowels may be shortened by a phonological process. Thus, a single long vowel has two different phonetic realizations:

- /i:/ → [ɛ, ɛ:],
- /a:/ → [a, a:],
- /u:/ → [ɔ, ɔ:],
- /ɔ:/ → [ɔ, ɔ:].
- Note that the high long vowel /u:/ is usually pronounced the same as /ɔ/ and /ɔ:/.

As can be seen, Yawelmani vowels have a number of different realizations (phones) which are summarized below:

	<u>Front</u>		<u>Back</u>	
	<u>short</u>	<u>long</u>	<u>short</u>	<u>long</u>
<u>High</u>	i		u	
<u>Near-high</u>	ɪ		ʊ	
<u>Mid</u>	ɛ	ɛ:	ɔ	ɔ:
<u>Low</u>			a	a:

## Syllable & phonotactics

The Yawelmani syllables can be either a consonant-vowel sequence (CV), such as *deeyi*- 'lead', or a consonant-vowel-consonant sequence (CVC), such as *xata*- 'eat'. Thus the generalized syllable is the following:

CV(C)

Word roots are bisyllabic and have either one of two shapes:

- CV.CV
- CV.CVC

## Phonological processes

### Vowel shortening

When long vowels are in closed syllables, they are shortened:

/p'a.xa: .t'it/ → [p'axa: t'it] *ḥaxaa t'tt* 'mourn (passive aorist)' (/a:/ remains long)  
 /p'a.xa: t'.hin/ → [p'axat'hin] *ḥaxa thin* 'mourn (aorist)' (/a:/ is shortened)  
 /ts'u.ju: .hun/ → [ts'ujɔ: hun] *čuyoo hun* 'urinate (aorist)' (/u:/ remains long)  
 /ts'u.ju: t/ → [ts'ujɔt] *čuyot* 'urinate (passive aorist)' (/u:/ is shortened)

### Vowel harmony

Yawelmani has suffixes that contain either an underspecified high vowel /I/ or an underspecified non-high vowel /A/.

- Underspecified /l/ will appear as /u/ following the high rounded vowel /u/ and as /i/ following all other vowels /i, a, ɔ/:

/-hln/                      -*hun/-hin* (aorist suffix)  
 /muɬhln/ → [muɬhun] *muɬhun* 'swear (aorist)'  
 /gij'hln/ → [gij'hin] *giýhin* 'touch (aorist)'  
 /gɔphln/ → [gɔphin] *gophin* 'take care of infant (aorist)'  
 /xathln/ → [xathin] *xathin* 'eat (aorist)'

- Underspecified /A/ will appear as /ɔ/ following the non-high rounded vowel /ɔ/ and as /a/ following all other vowels /i, u, a/:

/-tAw/                      -*tow/-taw* (nondirective gerundial suffix)  
 /gɔptAw/ → [gɔptɔw] *goptow* 'take care of infant (nondir. ger.)'  
 /gij'tAw/ → [gij'taw] *giýtaw* 'touch (nondir. ger.)'  
 /muɬtAw/ → [muɬtaw] *muɬtaw* 'swear (nondir. ger.)'  
 /xattAw/ → [xat : aw] *xattaw* 'eat (nondir. ger.)'

## Vowel epenthesis

Yawelmani adds vowels to stems, when suffixes with an initial consonant are affixed to word with two final consonants in order to avoid a triple-consonant-cluster.

# Grammar

---

## Case system

Yawelmani is a primary object language.<sup>[2]</sup>

A. L. Kroeber documented the language's case system in his 1907 paper *The Yokuts language of south central California*.<sup>[3]</sup>

Case suffixes (per Kroeber)

Objective	Noun	-a (i)
	<u>Demonstrative</u>	-n, -in
	(plural), Pronoun	-wa
<u>Possessive</u>		-in
<u>Instrumental</u>		ni
<u>Locative</u>		u
<u>Ablative</u>		nit

## Speakers

---

A 2011 estimate by Victor Golla placed the number of fluent and semi-fluent Yawelmani speakers at "up to twenty-five"<sup>[4]</sup>

## Revitalization efforts

---

In 1993, the Master-Apprentice Language Learning Program piloted a series of language programs that included Yawelmani. The program was reportedly effective in teaching conversational Yawelmani to tribal members without prior knowledge and increasing language use among elders.<sup>[5]</sup>
